H.265 Hardware Decoding

H.265 is a new compression technology of HD video against H.264.

H.265 only need half bandwidth to transmit same quality video comparing with H.264.

H.265 supports 4K × 2K ultra HD video.

Youtube already provides 4K × 2K videos

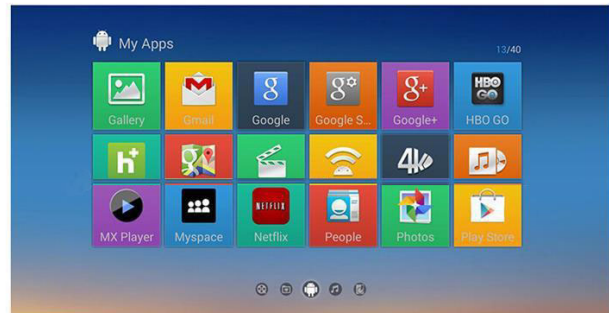

But the computation of H.265 is 3 times more complicated than H.264, so it requires hardware decoding not only software especially for 4K video playback, fortunately, S812 chipset supports H.265 hardware decoding.

H.265's excellent compression ability makes 4K × 2K videos more and more popular.
